ELECTRONICS AND COMMUNICATION ENGINEERING

SMART PARKING SYSTEM USING IOT

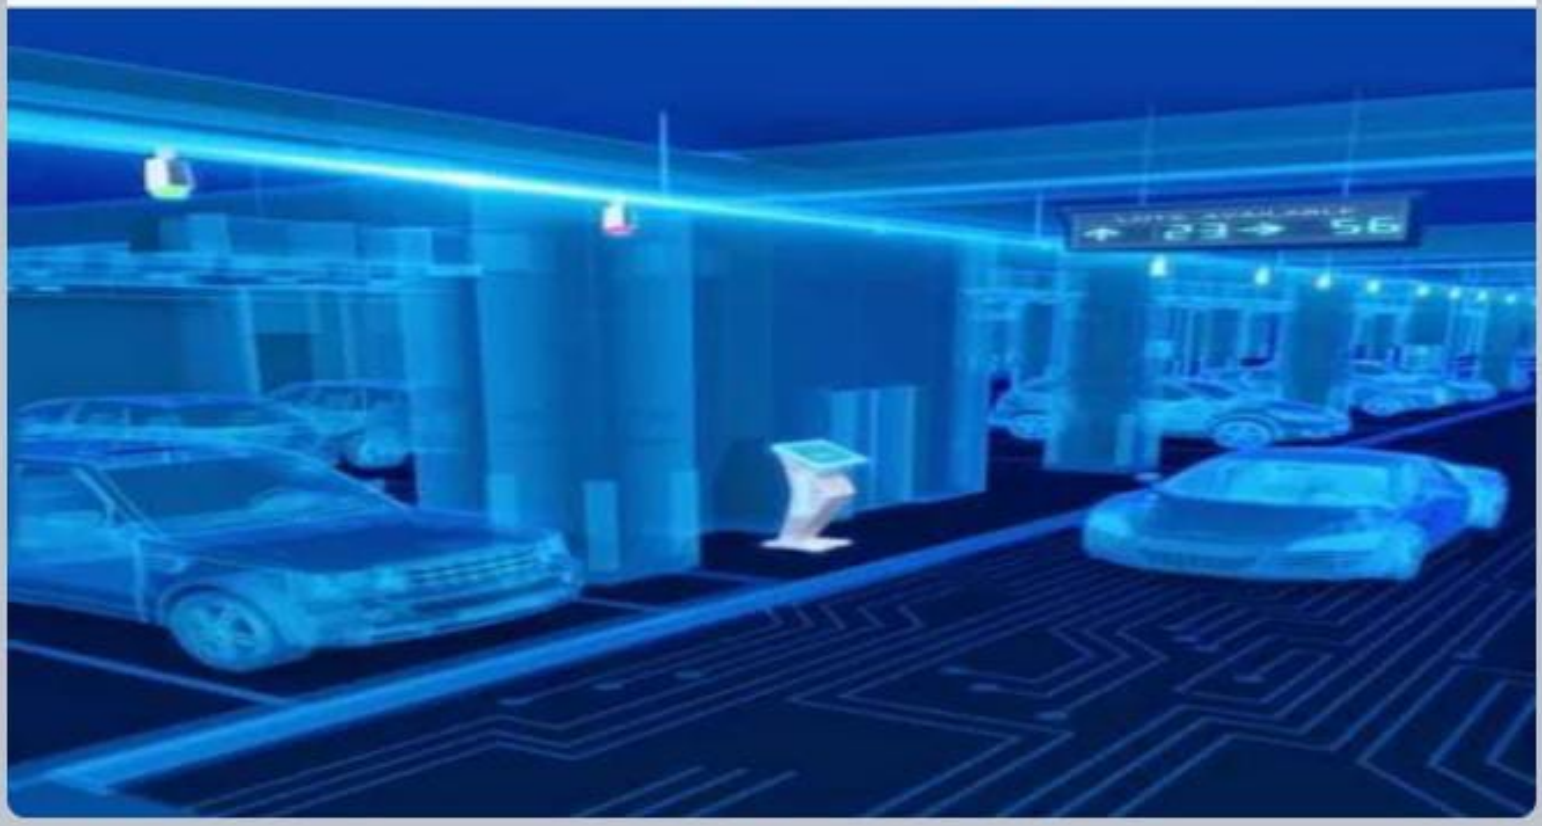
Contents:

- IOT
- Smart parking system
- Block diagram
- Advantages
- Applications
- Conclusion

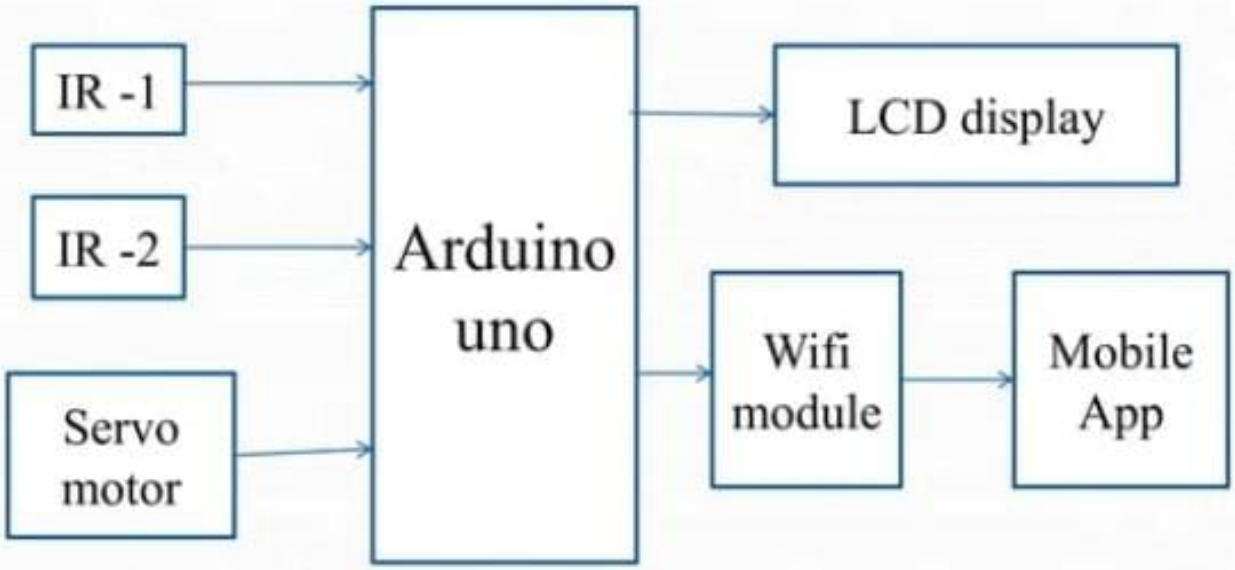
What is an iot?

- The Internet of Things (IoT) is the network of physical objects or "things" embedded with electronics, software, sensors, and network connectivity, which enables these objects to collect and exchange data.

What is smart parking



Block diagram:



IR sensor:

- 3v to 5v power supply
- Current 23mA to 43mA
- Range is 2cm to 30cm

Advantages-

- Shorter waiting time
- Saves fuel
- Guided to nearest place
- Reduce carbon emission

Applications

- The smart car parking system can be implemented in
  - Shopping malls
  - Restaurants
  - Theatres

Conclusion -

- The system benefits of smart parking go well beyond avoiding time wasting.
- Developing a smart parking solutions with in a city solves the pollution problem.

Future scope -

- The future of the smart parking system is expected to be significantly influenced by the arrival of automated vehicles (AVs). Several cities around the world are already beginning to trial self-parking vehicles, specialized AV parking lots, and robotic parking valets.

THANK
YOU
