

What is an iot?

 The Internet of Things (IoT) is the network of physical objects or "things" embedded with electronics, software, sensors, and network connectivity, which enables these objects to collect and exchange data.

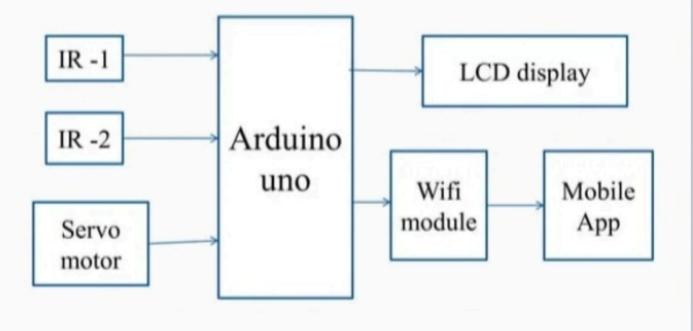

- People cannot find parking in popular places.
 Especially during holidays, traffic is always bad.
- People cannot locate their car in large parking slots

Arduino uno:

Applications

- The smart car parking system can be implemented in
- Shopping malls

Conclusion -

- The system benefits of smart parking go well beyond avoiding time wasting.
- Developing a smart parking solutions with in a city solves the pollution problem.

Future scope -

 The future of the smart parking system is expected to be significantly influenced by the arrival of automated vehicles (AVs). Several cities around the world are already beginning to trial self-parking vehicles, specialized AV parking lots, and robotic parking valets.
